

Due to the Covid-19 virus inspections any interior inspections will be done remotely by video or photographs or both as necessary. The inspector may require additional information in order to inspect and approve work. We will not be entering any occupied structures. Modules, conduit, cable management, ground rods, disconnects and inverters can be inspected from the exterior. Please have all covers off and placed facing out for labeling inspection. Please be sure that ground rods and clamps are not concealed. The inspector will ask that the system be placed in rapid shutdown. Please allow the inspector at least 10 feet of distance to view the display. Please call with any questions or suggestions regarding inspection requirements.*****

Please contact us to schedule "Facetime" inspections. If we have advance notice it might be possible to do video meetings on the day of the installation regarding structural upgrades and work to the interior.*****

Your understanding is greatly appreciated in these difficult times. Thank you for working with us in order to try and keep as safe as possible.*****
