

Dataforce-AFIS Integration Information Sheet

Overview

The Dataforce police records information system has been integrated with the Cogent Systems CLS1 LiveScan Booking Station. This integration reduces duplicate data entry and associated issues during the booking process. The integration was handled as part of the Dataforce migration from OpenVMS to Windows.

The Dataforce-LiveScan Integration project meets a business need of the Enfield Police Department by bridging the Dataforce system with the Automated Fingerprint Information System (AFIS).

The IT Department provided project management and data specifications for the interface as well as technical support for server configuration. Coordination with Enfield Police Department as well as two external vendors was also provided.

Highlights

- The Dataforce-LiveScan Integration streamlines the police booking process and reduces data entry
- Integration was handled as part of OpenVMS to Windows migration
- Key information is automatically brought from the Dataforce booking screen into the AFIS system using the LiveScan Booking Station

Interaction with Other Systems

- Dataforce Police Records Information System is now able to send data directly to the Cogent Systems CLS1 LiveScan Booking Station, and in so doing, into AFIS.

Project Details

- Project #: 07-193
- Finalization/Delivery Date: March 8, 2007
