

# Enterprise Backup System Information Sheet

## Overview

To protect the large volume of data stored on the various Town of Enfield file and application servers, the Hewlett-Packard OpenView Storage Data Protector Enterprise backup software was selected. Data Protector has the flexibility to back up large quantities of data from multiple servers simultaneously. Data Protector Backup Agents have the capability to backup applications such as Exchange and SQL without the need to shut down the applications. To round out this backup solution, data is backed up to a robotic tape library. Each tape in the 30 tape library has the capacity of 106GB. This gives a total online backup capacity 3.2 Terabytes.

## Highlights

- Fiber Channel connected
- Online application backups
- Back up multiple servers simultaneously
- Robotic tape library

## Interaction with Other Systems

- Exchange and SQL integration
- Storage Area Network connected

## Project Details

- Project # 05-9632
- Implemented 6/9/2005
