

Internet Access at Enfield Police Department Information Sheet

Overview

To lessen the impact of internet bound traffic from Enfield Police Department and Enfield Senior Center on the Town Hall gateway, a second connection to the internet has been installed. Internet traffic from these 2 locations is now routed through this new connection. In an effort to conserve bandwidth and increase access speed, a Microsoft ISA proxy server has been installed to cache content and control access. All traffic passing through this server is scanned for malicious content by Trend Micro's Internet Web Security Suite. To enforce compliance with the Town's computer use policy, an 8e6 R3000 filtering appliance blocks access to inappropriate web content.

Highlights

- Access to the internet through a local connection
- Cached content allows for faster access to frequently requested static pages
- Computer use policy enforce by filtering appliance
- Web traffic scanned and cleaned of malicious content

Interaction with Other Systems

- 8e6 Enterprise Reporter
