

Enfield Public Library Multilink PPP Information Sheet

Overview

Monitoring of the communications link to Enfield Public Library has shown there to be occasional high bandwidth utilization during certain periods of the day, primarily in the afternoon which corresponds to after school computer use. In an effort to proactively manage bandwidth and provide for the increased demand, a second communications line was installed and equipment was configured for increased data throughput. In addition to increased bandwidth, the design provides continued operations in the event one of the links becomes unavailable.

Highlights

- Increased bandwidth between locations resulting in faster access to resources.
- Provides failover capabilities in the event of link failure.

Interaction with Other Systems

- N/A

Project Details

- Project # 07-4807
- Implemented 4/25/2007
