

# Self-Service Application Reporting Information Sheet

## Overview

The IT Department has added an e-mail enhancement to the Town of Enfield/Enfield Public Schools Application Menu and command line applications. Staff can generate reports as text file attachments delivered via e-mail. Once a report is delivered to e-mail, staff has the flexibility to work with the digital output using standard Windows-based productivity applications.

The Self-Service Application Reporting project meets a business need for Town Staff by providing added reporting flexibility. Within the Town Information System, staff selects e-mail as the output destination. Command line applications are run issuing a new e-mail command at the system prompt.

## Highlights

- User-friendly method for flexibly reporting on Town information
- Ability to attach report output to e-mail from OpenVMS Application Menu
- Ability to attach report output to e-mail from OpenVMS command line applications

## Interaction with Other Systems

- OpenVMS-based Information Systems output reports to Windows Exchange e-mail server

## Project Details

- Project #: 06-42
- Finalization/Delivery Date: August 2, 2007
